Easy installation and flexible use

Mounted securely to the lift railing

MINILIFT LS1 is placed directly at the fixed base of the lift ensuring the right distribution of weight. To prevent the LS1 from tipping over it is mounted to the railing of the lift. MINILIFT LS1 has been designed for use on vertical mast lifts and scissor lifts. It may only be installed at the fixed base of the lift. Never on the retractable (Roll out) extension deck, as there is a risk of the lift tipping over.

X- and Y-axis adjustment

A console with 2 ball guides and 2 sliding carriages is mounted at the top of the lifting column. The console allows movement of the item +/- 11 cm in both directions, ensuring precise position and fast mounting.

Interchangeable item holders

We offer three types of item holders, to ensure that anything from pipes, ducts, cable trays and beams can be lifted. Straps hold items securely in place during transport and installation. Custom holders can be developed upon request.
